## LNF-LNC6\_9A

6-9 GHz Cryogenic Low Noise Amplifier

### Product Features

RF Bandwidth	6-9 GHz
Noise Temperature	1.6 K
Noise Figure	0.02 dB
Gain	42 dB
DC power (typical)	$V_{ds} = 0.7 \text{ V}$ , $I_{ds} = 15 \text{ mA}^*$
RF Connectors	Female SMA**
DC Connectors	9-pin Female Nano-D
One gate and one drain supply only	

\* See test report for actual optimum bias for your unit

\*\* Contact factory for alternative configuration

### Absolute maximum ratings

Parameter	Min	Max
$V_{ds}$	-0.5 V	2.7 V
$I_{ds}$		100 mA
$V_{gs}$	-20 V	20 V
DC Voltage on Input and Output	-30 V	30 V
RF Input Power		0 dBm
Operating Temperature	< 3 K	40 °C

### Typical Characteristics

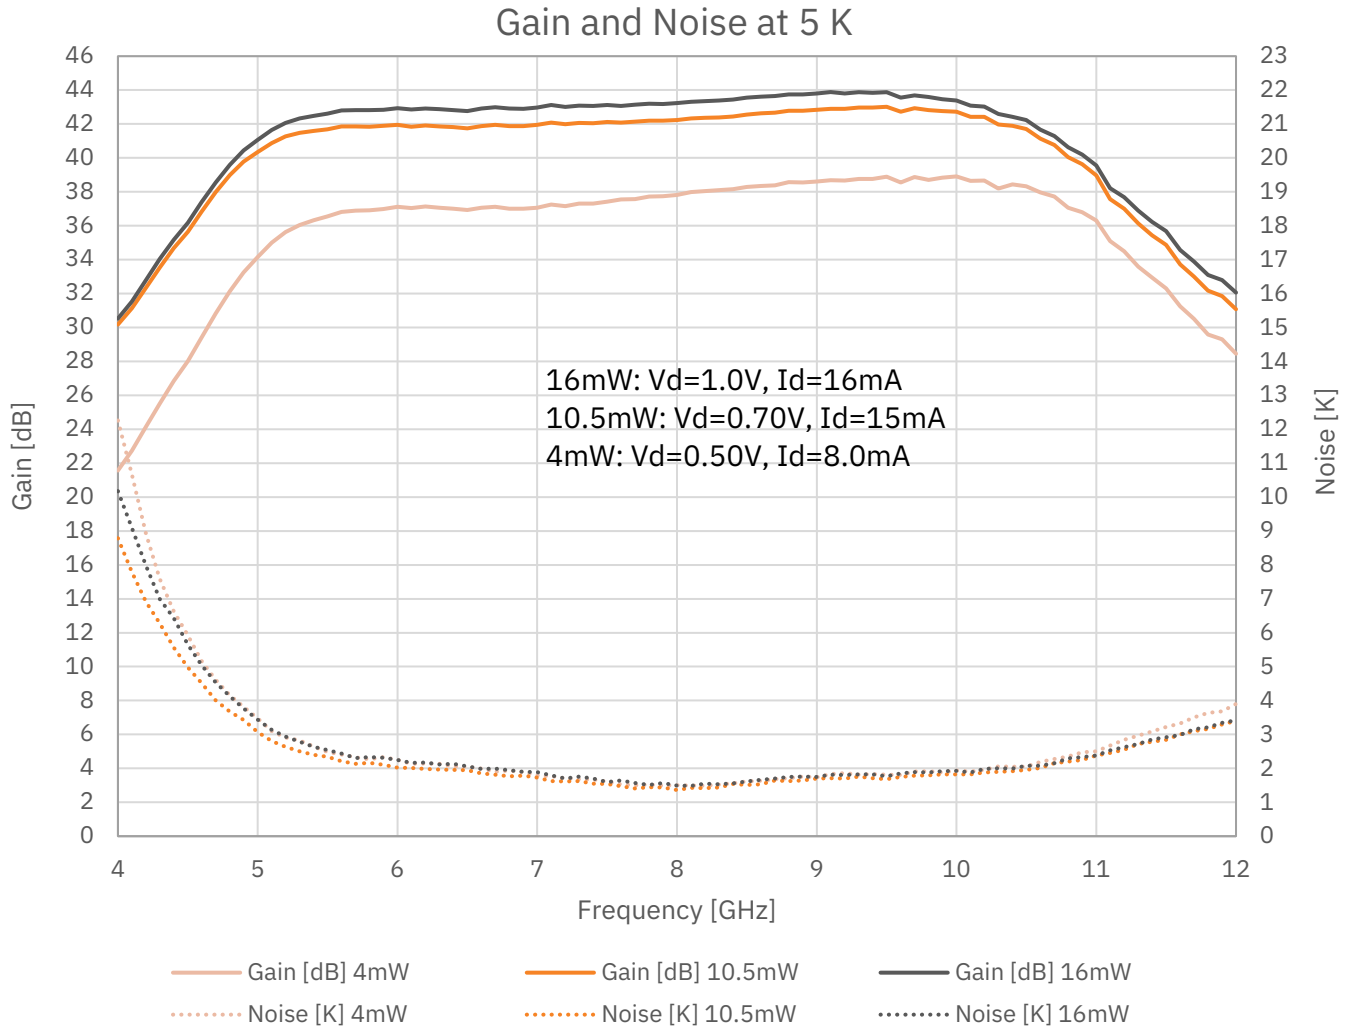

Parameter	Value	Unit
$V_{gs}$	+1.22	V
IRL	15	dB
ORL	18	dB
Output P1dB	TBD	dBm
OIP3	TBD	dBm
Weight	9	grams

LNF-LNC6\_9A is an ultra-low noise cryogenic amplifier using LNF's proprietary InP HEMT technology. MMIC technology ensures excellent unit-to-unit variation. The LNA is packaged in a coaxial module using industry standard SMA connectors for the RF ports and Nano-D to provide the DC. The lightweight gold plated aluminum body measures 17.00x14.30x7.80 mm excluding the connectors. The LNA is not hermetic and must be operated in a vacuum environment when below the dewpoint. All amplifiers are tested at 296 and 5 K and delivered with a test report.

Measured data,  $T_{amb} = 296\text{ K}$

Measured data,  $T_{amb} = 5\text{ K}$

## Dimensions and wiring

Units: mm

Nano-D panel connector seen from outside the LNA

---

## Biasing procedure

For safe operation of the LNA, please carefully follow the instructions below. Always honor the maximum ratings stated in the datasheet.

### A. With constant current supply, e.g. LNF-PS\_3, LNF-PS3b and LNF-PS\_EU2

Power up:

1. Switch on the power supply
2. Double check that  $V_d$  is set to the nominal voltage in the datasheet
3. Connect the LNA's RF input and output to your grounded test set-up
4. Connect the power supply to the LNA
5. Check that the measured  $I_{ds}$  is equal to the nominal value in this datasheet. Tune to the correct value if necessary.
6. Before starting a cool down, make sure that the power supply is set to the stated values at 5K. Do not cool down with the power supply set to the room temperature values.

Power down:

1. Disconnect the power supply from the LNA
2. Switch off the power supply

### B. With constant voltage supply, e.g. LNF-PS\_1

Power up:

1. Switch on the power supply
2. Set  $V_d$  and  $V_g$  to the nominal voltages stated in this datasheet
3. Connect the LNA's RF input and output to your grounded test set-up
4. Connect the power supply to the LNA
5. Fine tune  $V_g$  to get the nominal  $I_{ds}$  stated in this datasheet. The actual  $V_g$  can deviate a bit from the value in the datasheet depending on ground wire resistance in your set-up.
6. Before starting a cool down, make sure that the power supply is set to the stated values at 5K. Do not cool down with the power supply set to the room temperature values.

Power down:

1. Disconnect the power supply from the LNA
2. Switch off the power supply
